

Questions to Ask Your Prospective Home Builder

We at Mayberry Homes know that making the decision to build a new home can be intimidating.

Aside from making a large investment, there are other factors such as energy efficiency, warranty, customer service, building specifications, and scheduling to consider. Whew!

Here are some important questions to ask your prospective builder when it comes to energy efficiency:

How will the foundation be insulated?

Is every home individually tested and verified?

Is there any kind of GUARANTEE on my energy bills?

Can you tell me what my average energy bills will be?

Do you include a mechanical ventilation system for indoor air quality?

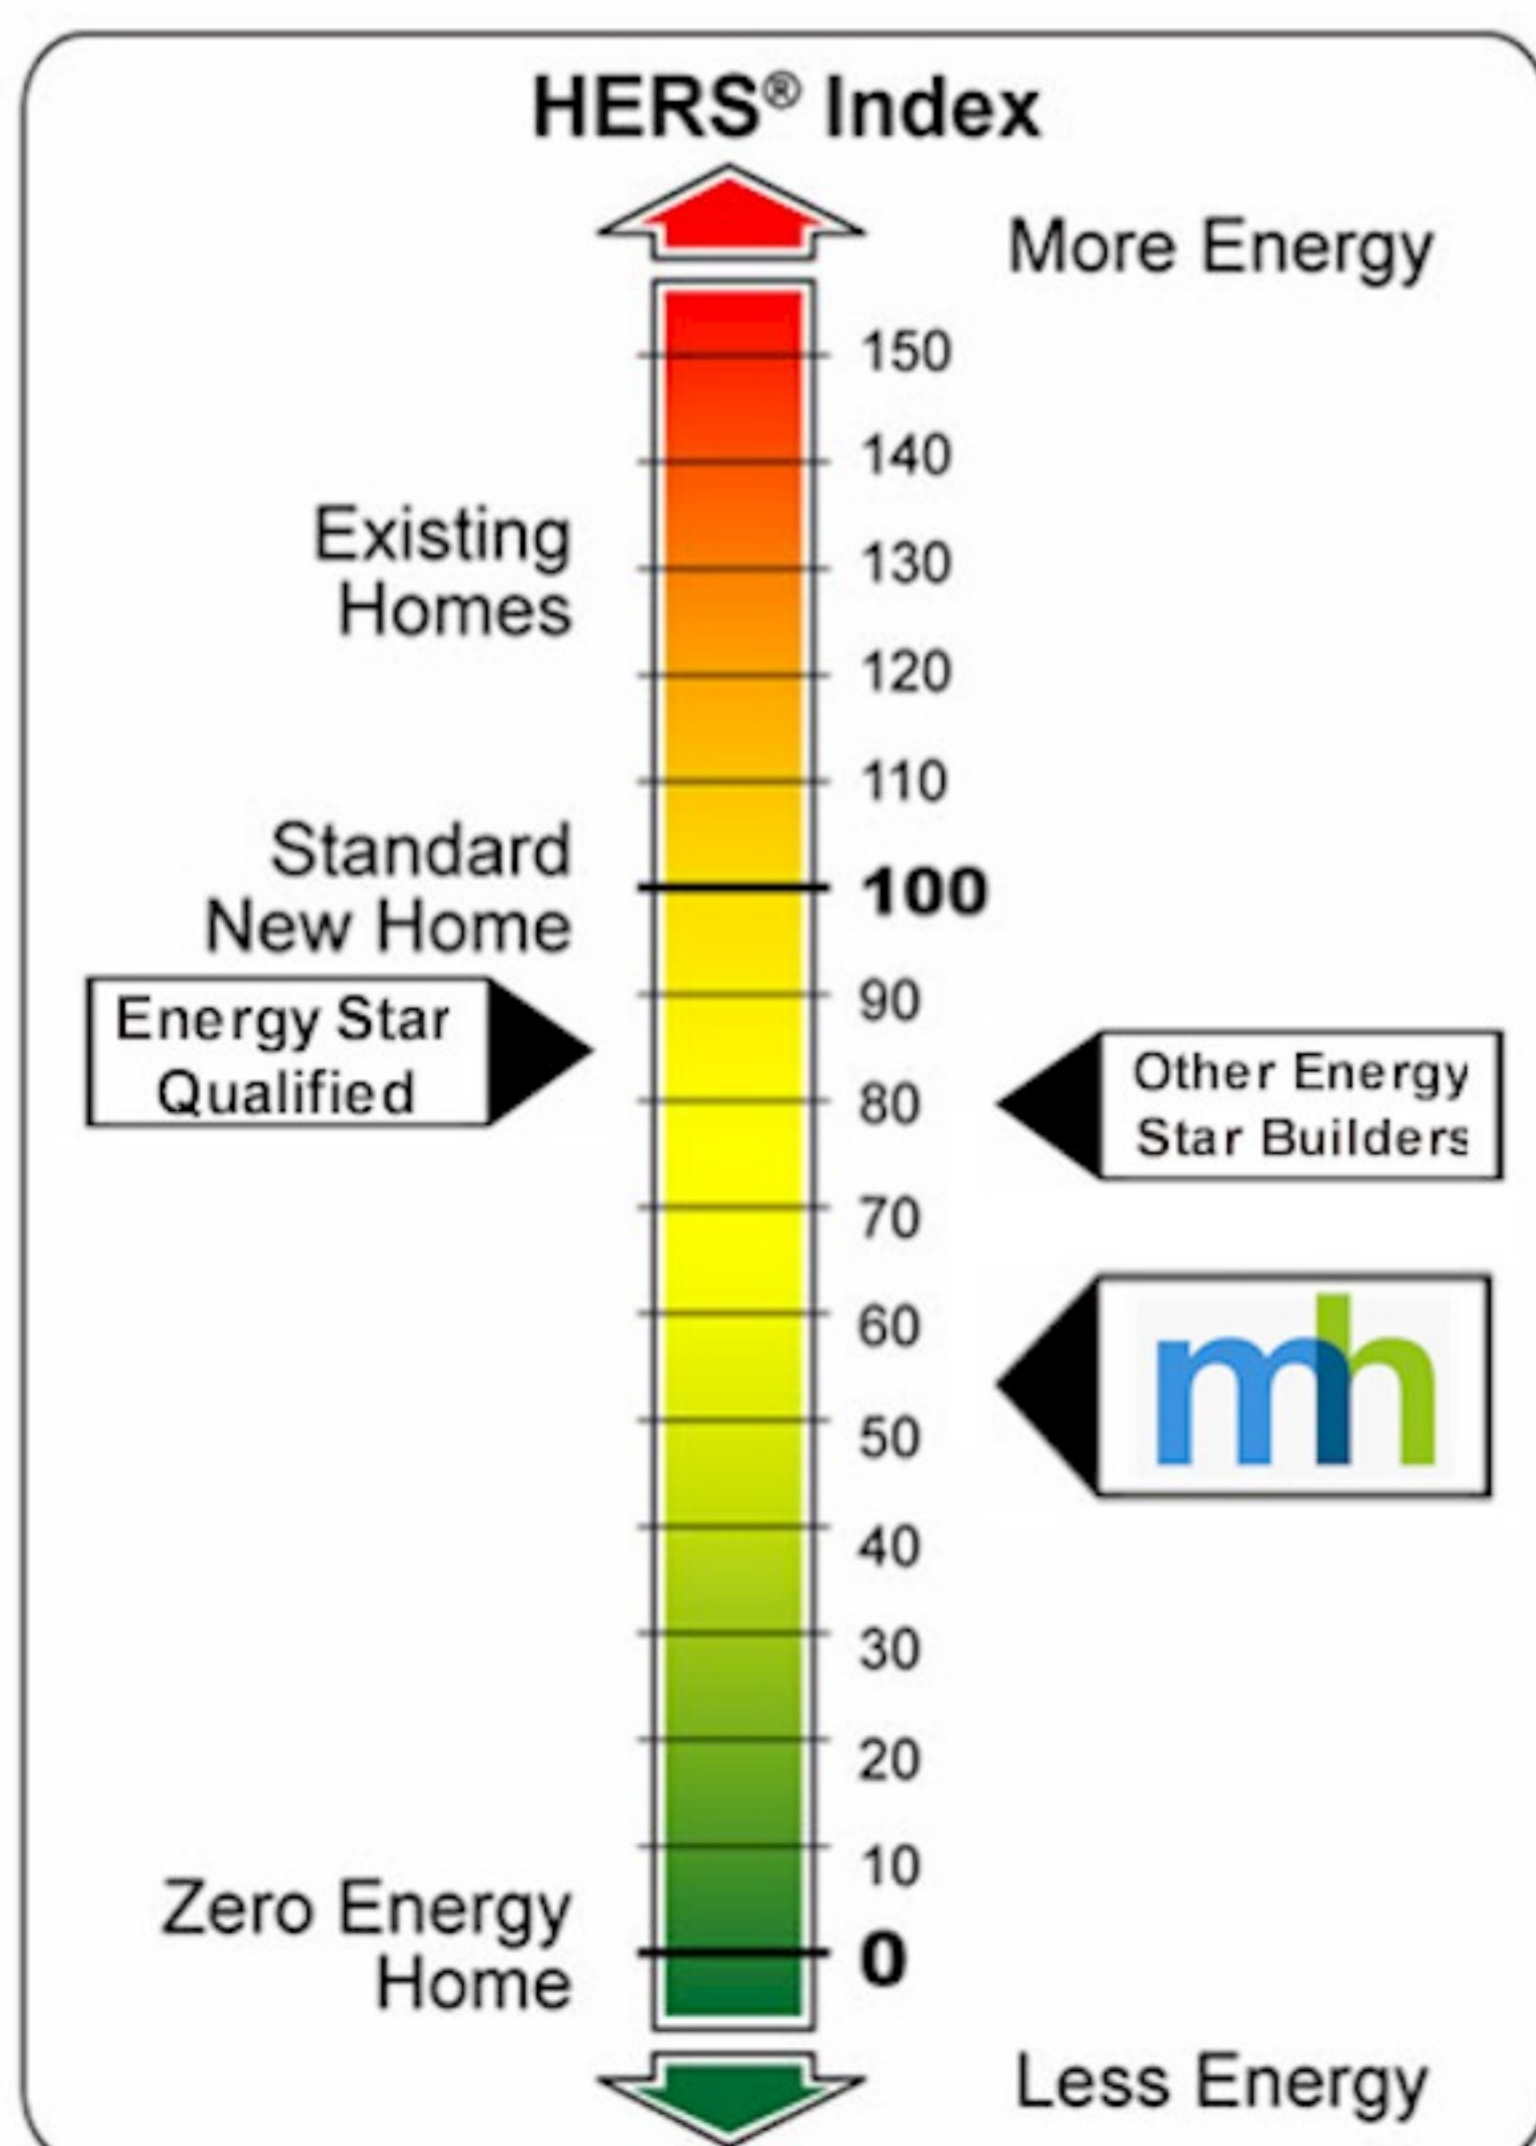

Buying a new home is one of the biggest purchases you'll ever make. By choosing one that has earned the government's trusted ENERGY STAR label, you can have the house of your dreams and enjoy peace of mind knowing it's been built to meet strict energy efficiency guidelines set by the U.S. Environmental Protection Agency (EPA).

More than 1 million families across the country are living in ENERGY STAR qualified homes. Together, these homeowners saved more than \$270 million last year on their utility bills, while avoiding greenhouse gas emissions equivalent to those from 370,000 vehicles. By choosing ENERGY STAR for your new home, you'll join the growing number of families enjoying a better home with lower ownership costs.

Mayberry Homes is proudly committed to building 100% ENERGY STAR qualified homes.
